UNIT - 7 Effective Relationship.....	23
❖ <i>Critical Thinking</i>	
❖ <i>Self-Awareness</i>	
UNIT - 8 Interview Skills.....	28
❖ <i>Effective Communication</i>	
❖ <i>Interpersonal relationship</i>	

Self-Awareness.....

When people are self-aware, they understand their strengths and challenges and know what helps them thrive. They also understand that how they see themselves may be different from how others see them. Let's recognize our feelings.....

Unit – 1: In Pursuit of Happiness

While writing stories or telling tales, we often use the words "emotions" and "feelings" as if they mean the same but they are not. Psychologically speaking, they are quite different, but at times it becomes difficult to differentiate between them. We all are born with a brain that has the same set of emotions wired into it, but

we acquire feelings with time as we grow up, just like we learn languages from our surroundings. Feelings are reactions to emotions. Psychologists have defined about a dozen core emotions like joy, anger, disgust, surprise, fear, etc., that are associated with our brain.

In contrast, there are thousands of feelings like happiness, panic, peaceful, energetic, etc., that occur in our mind as we go on living our lives. Feelings are connected to our mind, whereas emotions are associated with our brain. Feelings are personal and stored as

memories in our brains. Unlike emotions, feelings are difficult to understand at times. Feelings always follow emotions but the kinds of feelings vary from person to person and situation to situation. They are shaped by individual experiences, beliefs, values, upbringing (conditioning) and various other factors. For example, in a circus, we see a roaring tiger performing under a ringmaster. Our emotion should be of fear, but instead we may feel admiration for the majestic lion or even pity if we are a wildlife conservationist.

When we accidentally touch something hot cold, our hand instinctively, automatically or in a reflex withdraws itself. We do not have to think about withdrawing it. Emotions are instinctive too. We have no control over them. They are related to our immediate survival. For example, when we meet a roaring tiger, not in circus or a zoo but, deep in jungle where somehow we got lost, we will be filled fear and will run. After all, our ancestors in the jungles did not survive by negotiating with the lions (predators). Those who did not run did not survive, and today we all are the successors of those who survived. Unlike emotions, feelings are not instinctive, and we can control them. Since we can control how we feel, we can also control our actions based on our feelings. Actions can be safe or unsafe, healthy or unhealthy, and they can have consequences that can be short or long term. We have to learn to express as well as control our feelings appropriately. Feelings are learned behaviours that are usually in hibernation until triggered by an external event.

Measuring happiness:

Unlike happiness (a feeling), joy (an emotion) involves little cognitive awareness. We feel joy without consciously deciding to and it is long-lasting. While happiness is usually induced by and dependent on

external conditions, joy is a something we experience more deeply. Joy is a state of being that is not necessarily tied to external situations. While happiness is a state of mind based on circumstances, joy is an internal feeling that disregards circumstances. To understand happiness, let us do a thought experiment. Imagine, we take an image (CT scan) of the brain of a poor farmer who is unhappy. She is unhappy because she is poor and to make matters worse, she has lost all her crop to bad monsoon. Her CT scan records her brain's electric, magnetic and chemical signatures in the form of a sine wave, i.e. valleys and peaks. It shows 8 valleys and 2 peaks. We compare it with that of a happy person who is rich and has just won an enormous amount of money in a lottery. She has 10 peaks and 0 valleys.

The chemistry of happiness:

Now, a psychiatrist administers medicine that has dopamine in it to the poor unhappy farmer. Soon, she begins to feel good, and after a few more doses, she feels happy. Dopamine, just like adrenaline, is a hormone produced by the organs of our body. It keeps us motivated and makes us feel good among other functions, provided it exists in the right quantity in our body.

A few sayings about happiness:

Happiness is a direction, not a place. | Happiness depends upon ourselves. | It is not how we have, but how much we enjoy, that makes happiness. | The real secret of happiness lies in taking a genuine interest in all the details of daily life. | People should find happiness in the little things, like family and friends. | There is no happiness like that of being loved by your fellow creatures, and feeling that your presence is an addition to their comfort. | Happiness is not something

readymade. It comes from your own actions. | Happiness cannot be traveled to, owned, earned, worn or consumed. Happiness is the spiritual experience of living every minute with love, grace, and gratitude.

Suggested viewing: Movie 'Inside Out' by Disney and Pixar.

Unit – 2: Don't Give Up

Do you know that Thomas Edison failed 1,000 times before he was successful in creating the light bulb? Can you imagine what would have happened if he just gave up?

Each day is a challenge for some of us. Some of you struggle to get up each morning and make it to school. But you find it within yourself to do because the hope of a better tomorrow compels you to do so. It is not easy to explain your condition to your family, friends, and teachers. The moment you leave your house and step on the bus, you are one step closer to realizing your dream, to fulfilling your purpose. That is what perseverance is. It is finding the strength to do the impossible because you know that all things are possible. It is understanding that your future has great possibilities because of the steps you take today.

Perseverance: Perseverance is the ability to go on when things seem hopeless. It is also a mean of success, or at least how much sacrifice one is willing to make in the name of success.

When a child learns to stand up and tries to walk, he/ she is bound to fall down again and again. And by nature and instinct, he/she gets up, and again tries to step forward, although again he/she falls down. But ultimately, he succeeds in walking. The same thing had once happened with each one of us, when we were children.

Similarly, in spite of his repeated failures, a man having perseverance does not admit his defeat. He tries again and again, and finally attains

success. A persevering person is one who has tremendous self-confidence, determination, and a natural urge towards hard labour, and will use his energy to the fullest.

TIPS TO DEVELOP PERSEVERANCE: THE SECRET TO SUCCESS

Milkha Singh, also known as the Flying Sikh, became the first Indian to compete in an Olympics athletic event. He lost his family to the brutal violence that followed the partition of India. He brought discipline and direction to his life, when he joined the army and decided to compete in athletics. His determination became critical to his success.

Clarify Your Goal: Base it on your purpose, needs, and abilities. Know why you want this goal and how you and others will benefit?

Intend to Achieve Your Goal: Outline your goal, strategies, and timeline. Know resources that can help you attain it, including individuals and the Internet.

Break the goal into small steps, working backward from your desired outcome and attainment date.

Maintain Optimism: Expect good things. Keep a daily diary of good experiences.

Live in the Present: Don't worry on the past or about what might happen. Let go of attachments. The more attached you are to something, the greater the fear of losing it.

Acknowledge Your Accomplishments: Judge these against personal standards of self-improvements. Have the courage of your convictions. Don't change for others, or compare yourself with them.

Try New Experiences: Always keep trying new things which can help you to improve better and achieve your goals.

Care for Your Mind, Body, Emotions, and Spirit: Take time to care for your mind and body. Do regular exercises, yoga to keep your mind and body fit. Eat healthy food, take sufficient sleep and take out time for your friends and family.

Consistent: Focus on goals daily. Make short-term-goals and try to achieve them. Keep checking. if your are moving in right direction or not.

TEST YOUR PERSEVERANCE QUOTIENT

Give yourself one for each "yes" to the following:

- ❖ I believe in myself.
- ❖ I have clear career goals.
- ❖ I am aware of my limitations.
- ❖ I bounce back from disappointments.
- ❖ I persist.
- ❖ My family and friends support me in achieving my goals.
- ❖ I can adapt to change.
- ❖ I focus and complete my task on time
- ❖ My goals are consistent with my purpose and values.
- ❖ I can take stands when I believe I'm right.

Add your "yes" scores. The higher your score, the more perseverant you tend to be.

**"Life is like riding a bicycle. To keep your balance, you must keep moving."
-Albert Einstein**

Unit – 3: Learning Never Stops

It is rightly said, never stop learning....because life is the teacher which gives you the opportunity to learn new things each and every day. It motivates you to learn and defeat the challenges which we come across. The greatest teacher you could ever have is your life. Knowledge can come from anywhere and everywhere.

Life gives you the best lessons from sacrifice to compromise, and a wise man will always take each of them seriously.

All we need is to grab it and inculcate that in our day-to-day lives. Many times, you may fall down, but remember that it's not the ending. Failures will force you to loosen down but, losers are the ones who refuse to stand up, not the ones who fall down repeatedly.

No matter how many times you find yourself lost or broken, all that matters is the time, when you didn't feel like starting things all over again. One must always have an attitude to continue learning new things,

Learning is a never-ending journey. From birth till death, we are in a continuous cycle of learning new things. It is a necessary part of our life. By observing new things and experiencing it in our lives, our sight of perspective broadens and changes the way we see the world. It improves our behaviour and the way we think, by expanding and challenging our understanding. We get to know a lot of things and

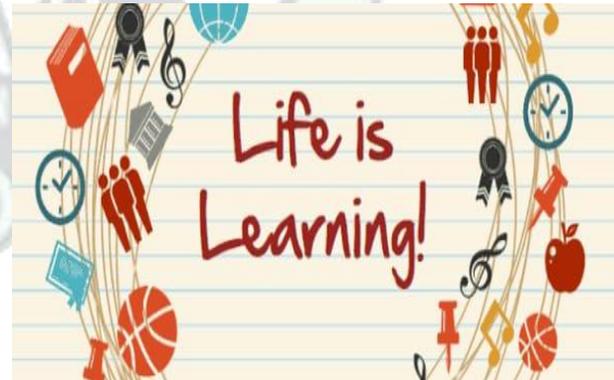

these things become our memories which are lessons to the life. **Life teaches you the lesson to live.**

"The past can hurt. But the way I see it, you can either run from it, or learn from it."
- Walt Disney

*Never stop dreaming,
Never stop believing,
Never give up,
Never stop trying, and
Never stop learning.*

ADVANTAGES OF A LIFELONG LEARNER

- Lifelong learning leads to an enriching life of self-fulfillment.
- Lifelong learning helps us make new friends and establish valuable relationships.
- Lifelong learning keeps us involved as active contributors to society.
- Lifelong learning helps us find meaning in our lives.
- Lifelong learning helps us adapt to change.
- Lifelong learning makes the world a better place.
- Lifelong learning increases wisdom.

HOW TO DEVELOP WILLINGNESS TO LEARN?

1. Always remember that a desire to learn is the path for making your dreams a reality. Repeat it yourself every single day. If you want to succeed you have to be up to date!
2. Meet Inspiring People. Surround yourself with highly-intelligent and well-educated people. Try to learn from them. Anyone of us knows someone who has a successful career and is driven by a desire to learn so, keep on meeting inspiring people to enhance your learning.
3. Be Open to Taking Advice: Search and ask for opinions of other people who are competent in the area you want to develop. Listen carefully to their points of view. There is a lot to learn from highly-educated and competent people.
4. Read Stories about Successful People. You can learn a lot from their experience. It is so motivating to learn about someone who was not that privileged, but still went on to achieving wonders.
5. Don't be Scared of Failure. Learn from it. There are many people that learn a lot, then fail, then get scared and, then stop learning. It is a mistake! All of us will meet failure sooner or later. Look at failure as a way to learn more new things. Turn the failure into motivation to succeed, not into a reason to give up.
6. Find out what are your weaknesses and gaps in the field you want to develop. When people know what their gaps are, they want to fill them. List all your weaknesses and think about ways to resolve them.

"Live as if you were to die tomorrow. Learn as if you were to live forever."
--Mahatma Gandhi

Unit – 4: Cyber Bullying

It is a new type of bullying that has become prevalent with the widespread use of the Internet. It occurs when a child or teen uses the internet for emails, text messages, messaging, social media websites, online forums, chat rooms, online gaming or other digital technology to harass, threaten, or humiliate another child or teen. It can happen 24 hours a day, 7 days a week, and has the power to humiliate a kid even when they are safely alone at home. Cyber bullying doesn't require physical strength face-to-face contact and isn't limited to just a handful of people at a time. Cyber bullying messages and images can be posted anonymously and distributed quickly to a very wide audience. It can be difficult and sometimes impossible to trace the source. To make matters worse, anything shared on the Internet is almost impossible to delete and can be shared with people across the world in no time.

How a cyber-bully hurts:

- ❖ Deliberately excludes someone from an online group.
- ❖ Pretends to be you online to send embarrassing or damaging messages that will affect your relationship with others.
- ❖ Repeatedly posts or sends offensive, rude, and insulting messages to/about you.
- ❖ Spreads lies and rumours about you.
- ❖ Posts videos or sends unwanted intimidating messages.
- ❖ Engages in online fights, posting scornful or and offensive messages.
- ❖ Tricks someone into revealing secrets or embarrassing information, which is then shared online.

- ❖ Posts comments that are threatening or imply violent behaviour and/or displaying self-harm tendencies.

What to do if you are being cyber bullied?

Don't blame yourself - It is not your fault that you are being cyber bullied. You should not let the cyber bully's words or actions make you feel ashamed of who you are or what you feel. The cyber bully is the one with the problem, not you. So...

- ❖ Block the bully
- ❖ Save the evidence of cyber bullying
- ❖ Report
- ❖ Be absolutely inflexible

How to protect yourself from cyber bullying?

- ❖ Use computer courtesy
- ❖ Think before posting
- ❖ Keep personal information private
- ❖ Create safe boundaries
- ❖ Be an active bystander

Technology is a useful servant but a dangerous master

Unit – 5: Safety

When you were a child, your parents created many rules for you to follow so you could be safe. For example, you had to look both ways before crossing the road. Now that you are older, you know that new and unpredictable situations keep coming up all the time. You need to make safety plans for them. If you are not sure what you should do to be safe, discuss with your parents and teachers in advance what you can do in each situation to be safe. For example, if you are walking home from tuition class and someone starts following you, what should you do? There are many things you can do, but it helps to think about this ahead of time so that you are prepared if such a situation arises.

What this means is that you need to be alert to all kinds of situations - not just what happens to you, but also the things that happen to your friends, or what you hear about on the news. In each case, think: 'What if this were to happen to me?' Then, make safety plans for it.

What if you are the only passenger left on a public bus?

What if you are at a friend's house when some other friends come, and you begin to feel that it is not a good idea for you to be there?

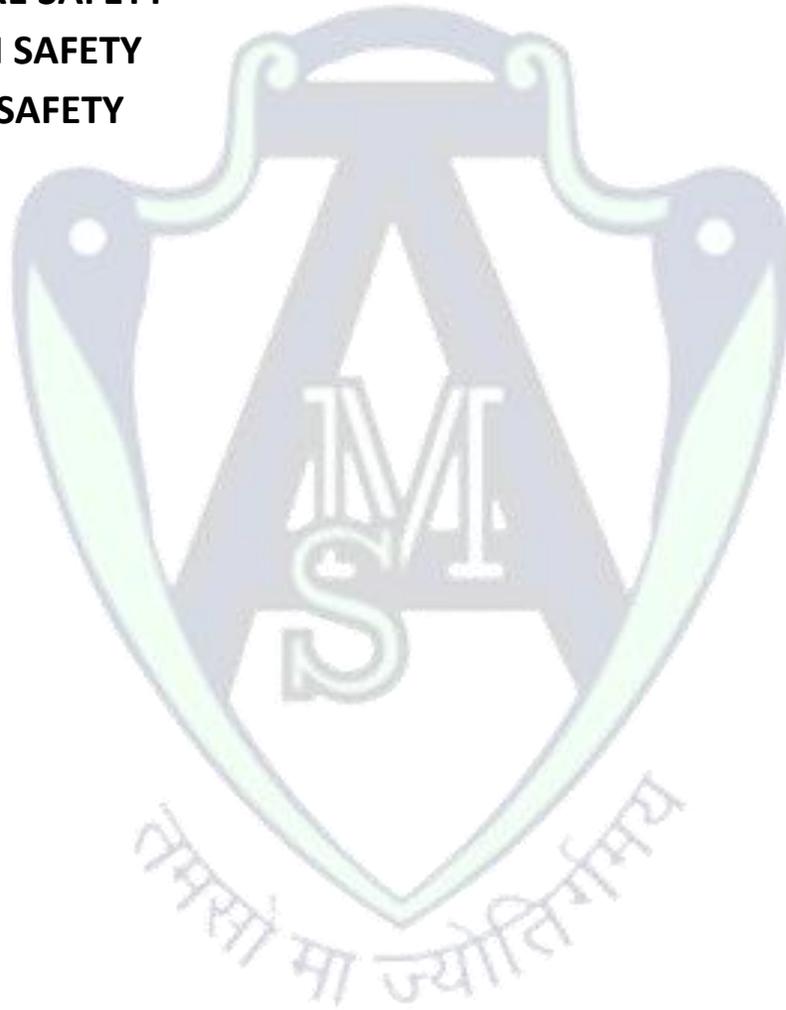

What if your tuition teacher starts talking to you in a way that makes you uncomfortable?

What if your younger sibling falls sick suddenly, and you need to take care of them while ensuring the security of the house?

It is unsafe for you to tell anyone your personal information like your name, address, phone number, your parents' names, your school's name, etc. Decide with your parents how much personal information

should be shared with whom, and on which forum. Always follow the safety plans you have made with your parents.

- ❖ **SEEK SAFETY**
- ❖ **AIM SAFETY**
- ❖ **FOLLOW SAFETY**
- ❖ **ENSURE SAFETY**
- ❖ **TEACH SAFETY**
- ❖ **YIELD SAFETY**

SELF DEFENCE

Anything that allows you to be safe is self defence or anything that makes you more aware, more assertive and more able to distract the wrong doer, and keeps you safe is self defence.....

That is why it can be learnt by anyone, no matter their age, size or fitness level. Self-defence techniques also include how to identify potential threats, how to remain calm in unfavourable situations, and why and how to fight using words. Remember, there is no guarantee that we can protect ourselves. What self-defence training does is that it gives us more choices of how to act and helps us prepare our response. You might be surprised to know that the best response for someone faced with an attacker is to slow down the attacker, try to calm things down as much as possible, and prevent the attack. Self-defence is a tool. Like any other tool, the more you know about it, the better will be your decision to use it or avoid using it, in a given situation.

It is important for you to understand that physical self-defence is a need, not a want. A good self defence programme does not "tell" someone what they "should" or "should not" do. Instead, it offers options, techniques, and a way of analysing situations to help the person make a good decision. A good self-defence programme empowers us to make good decisions when faced with unfavourable situations."

SAFETY TIPS

- ❖ If you feel unsafe or uncomfortable in a situation, act on it. Don't hesitate to ask for help.
- ❖ Keep calm, think straight Even the best martial artist will not be able to defend themselves if they panicked.
- ❖ Set clear boundaries If you feel that someone is invading your 'private space', tell them clearly to back off. Make direct eye contact-don't look down/look away.
- ❖ Better safe than sorry - you feel that you are in trouble that someone stalking or eyeing you, try to avoid walking alone or walking in an isolated area.
- ❖ Even if you're alone, you can walk close to another group. If you cannot do that, stay very alert. Keep the exit points in mind-that is ,areas by which you can escape. If you feel uneasy, you can also shout or make a loud noise to startle the other person.
- ❖ If possible, try varying your routine. It becomes easy for a potential perpetrator to plan something if they know your regular time and route. At the very least, you should know an alternate route in case of an emergency.
- ❖ Walk and talk confidently People who appear confident are much less likely to be targeted as compared to someone who looks timid.
- ❖ Be aware of your surroundings -Try to avoid places with low visibility and lighting.
- ❖ Walk in the opposite direction of traffic -This way, you can look at oncoming traffic. Also, walk on the footpath, not the road. It makes it harder for others to snatch your valuables or to kidnap you.

- ❖ When taking a public bus, avoid one that has few or no passengers, and avoid taking roadside cabs and autos.
- ❖ You should have your parents' and other trusted adults' phone numbers on speed dial on your phone so that you can call them instantly in an emergency. If you have a smart phone, install emergency apps that can send SMS to known people and can even dial the police's number with a single click in case of an emergency.

Unit – 6: Plan Your Future

Planning and setting the goals can be vital for anyone with a vision for their future. It is the fundamental management function, which involves deciding beforehand, what is to be done, when is it to be done, how it is to be done and who is going to do it. It is an intellectual process.

WHY IS PLANNING IMPORTANT?

- It helps identify your goals and helps you decide clearly and concretely what you need to do.
- It helps you to ensure that you understand your goal and what you need to do to reach it by involving everyone in the planning process.

- It makes you work in a goal-oriented way rather than in a loose or ad-hoc way where we just respond to issues and crises with no clear plan or goal.
- Planning helps you see in advance those things that can help you achieve your goal and those things that can prevent you from achieving your goal and work out what to do about them.
- Planning helps you decide how best to use resources (people, time, money, information, equipment) so that these elements make the most significant contribution to achieving your goal.
- Most importantly, planning helps you to be accountable for what you do.

BENEFITS OF EFFECTIVE PLANNING

Benefits of Effective Planning are as follows:

1. **Reduce Anxiety:** Identify strengths, weaknesses and areas where you can improve. You're able to keep your options open and have the flexibility.
2. **Career Planning:** Career planning refers to the strategy a person uses to determine career goals and the path to achieve those goals. The process integrates various activities, including steps for self-improvement and the process of meeting these goals.

Steps to Plan Your Future Effectively

Steps to plan your future effectively are mentioned below:

1. Know Yourself: At this stage in the game, your goal is to figure out who you are and what you want in life. Getting to know yourself will help you plan for your future based on what really matters to you.
2. Explore Possibilities: Once you've gotten to know what drives you, you'll want to start exploring your career and education options.
3. Choose a Direction: Choosing a direction is a matter of weighing your options, evaluating the pros and cons, and finding your best fit. Remember: there's no such thing as a wrong decision. Career planning doesn't mean making one BIG decision about what you'll do for the REST of your life. It's about continually making choices and exploring opportunities.
4. Make it Happen: Once you've gotten this far, it's time to make plans and put them into action. This phase of your career and education planning journey is all about setting goals and then working to achieve them.

“If you want to live a happy life, tie it to a goal, not to people or things.”
- Albert Einstein

Unit – 7: Effective Relationships

BUILDING UNDERSTANDING

The first relationships we have in our lives are with our immediate family, including our parents, siblings, and our grandparents. Next come aunts, uncles, and cousins, which can be counted as extended family. The earliest and closest bonds that we have go on to form the basis for all relationships we have as adults. If we have a secure, happy relationship with parents, there are higher chances of us having secure, healthy relationships with our spouse and friends, too. On the other hand, if the bonding with parents is not secure and caused anxiety in us as kids, we will carry forward that anxiety and insecurity into other relationships as well.

An average adult forms a number of relationships in his/her life-with friends, partner, partner's family, colleagues, neighbours, their own children, and so on. All of these relationships serve a purpose. For instance, the relationship with one's partner provides emotional and financial support, social security, a family structure etc. A relationship with friends is meant to be a place where one can express oneself and have fun, as well as do things related to shared interests. However, these examples are those of the ideal nature. In reality, not all relationships with friends or partner are fulfilling or supportive. Relationships that add anxiety and stress to your life are unhealthy relationships.

Relationships are an important aspect in determining a person's mental health. Healthy, effective, or valuing relationships are supposed to give an individual a sense of comfort and joy instead of being a stressor.

Healthy relationships can even act as a healing space for other issues in one's life providing a sense of support. Strained or ineffective relationships, on the other hand, can drain the sense of joy out of a person and turn into an immense burden.

So how does one distinguish an effective, healthy relationship from an ineffective, unhealthy one? The main characteristics of an effective relationship are given below:

- ❖ **Mutual respect:** Both individuals should have respect for each other. This doesn't only mean talking politely; it includes respect for each other's ideas, values, and beliefs, even if they are different from your own.
- ❖ **Trust:** While it is not wise to trust someone blindly, there should be a basic level of trust between two people. If you doubt every reaction and action of a person, you cannot have a peaceful relationship with them. Similarly, if you feel that the other person doubts you, you will be on guard all the time around them.
- ❖ **Good communication:** This involves being able to exchange ideas and opinions clearly and calmly. If most conversations turn into arguments or clashes then the relationship is not healthy.
- ❖ **Authenticity/Individuality:** You should be able to feel comfortable enough around a person to speak and act in a way that comes naturally to you. If you constantly find yourself having to pretend for the sake of the other person, the relationship cannot be healthy or long-lasting.
- ❖ **Fighting fair:** It is normal to have differences of opinion. However, in an effective relationship, conflicts are solved calmly and not allowed to be dragged too much. Abusing, yelling, silent treatment, etc all mean that the relationship is unhealthy.

Benefits of Effective Relationships

- ❖ Better mental and physical health: Happy relationships with people ensure that our stress levels stay low, and this leads to better heart health and a stronger immune system. High stress caused by being in unhealthy relationships is harmful and can lead to anxiety, insomnia, and depression.
- ❖ Better mood overall: A person who is getting the required support and affection from their close relationships is more likely to be cheerful, optimistic, and more productive. A happier person is also less likely to fall ill and has higher levels of self-confidence.
- ❖ Quicker recovery in tough times: None of us have a challenge-free life. Having valuable and healthy relationships helps us face challenges in a stronger and more confident manner and also recover more quickly from setbacks. For example, if you happen to score poorly in your exams, and your parents, instead of yelling at you, support you through it, you will be more upbeat about your next exam.

FOR THE TEENAGER

Teenage is the time for understanding your own place in the world. Relationships formed at this age may make or break your future. However, power of judgement at this age may not be developed fully and one makes many mistakes in judging who would be a good friend and who wouldn't. The important things to remember are:

- ❖ All of us make mistakes and sometimes end up trusting the wrong person who may hurt us or lead us to adopt bad habits.

- ❖ Once you realise your mistake, act on it immediately and take steps to protect yourself.

When trying to decide if a friend is genuine or not, ask yourself how you feel in their presence. If you feel comfortable, happy, and peaceful, you can continue to forge a relationship. However, if you feel uncomfortable or put down, or bullied, or that you have to pretend to be something you are not, or do things that you are not comfortable doing, you should immediately back off and stop trying to form any kind of relationship with such a person. At the same time, you must understand that even a good, healthy relationship will have conflicts and difference of opinion. The important thing is what the issues are and how they are sorted.

Healthy relationships with peers during teenage can be an important way to develop social skills, learn about other people, and grow emotionally. The kind of company you keep reveals your beliefs and value system. It also affects the choices you make for higher education, career, and in your personal life. Effective relationships help you cope with academic pressures, family issues, and any other personal struggles.

WAYS TO IMPLEMENT

There are all kinds of individuals in this world, and you are sure to come across many who you cannot get along with and many who become very important to you. Around some people, we feel naturally relaxed and joyful and these are people whom you should forge healthy relationships with. Besides this, you should also strive to make your existing relationships healthy and happy. In general, a few things you can do to create healthy relationships are:

- ❖ If you think there's a chance that you are responsible for some of your relationships getting negatively affected, step back immediately and correct your mistake. Never hesitate to apologise if you have hurt someone.
- ❖ Allow yourself to learn from your mistakes and move forward rather than blaming yourself or looking at the relationship in a negative way. Think positively and give people benefit of doubt if some actions or words of theirs hurt you.
- ❖ Avoid becoming bitter about fights and disagreements. Try to make up as soon as possible and don't act egoistically with loved ones.
- ❖ Do your best to maximize time spent with the friends and family you enjoy being around, and minimize interactions with those who aren't as pleasant and who bring negativity into your life.
- ❖ In case it is impossible to avoid conflict, use relaxation techniques such as deep breathing, taking a walk, listening to music, etc to let go of the stress caused by other things that may affect you close relationships.
- ❖ Learn how to manage yourself around people you care about so that each interaction you have with them is joyful and loving. This will have a good impact on your health and life.

“Love creates an ‘us’ without destroying the ‘me’”

-Leo Buscaglia

Unit – 8: Interview Skills

Before the interview:

Dress for Success

If you don't own any professional clothing (jeans and t-shirts usually do not fall into this category), then it's time to invest in some grown-up clothing. While some companies, especially start-ups, are a little less buttoned-up than, say, a bank or legal firm, it may be useful to discern your potential company's dress code before your interview.

If your job interview is online via Zoom or a similar platform, make sure to avoid strong patterns that might be distracting on video and keep your outfit professional—even if you don't think they will see what you are wearing from head-to-toe.

Arrive Early

If you are not sure where the interview location is, go there before the day of the interview, find your parking options, and make sure you know where to go. On the day of the interview, make sure you leave in plenty of time to get there, not just on time but early.

Key Takeaways

- ❖ Whether you are interviewing in-person or online, do your research on the company ahead of time and be prepared to speak confidently about why you are a good fit for the job.
- ❖ Practice for your interview with a friend, mentor, professor, or family member. If you have a virtual interview, practice using an online tool to get comfortable with a video format.
- ❖ Always write a follow-up thank you email or card after your interview.
- ❖ If you are asked to conduct a virtual interview, make sure you are set up for a smooth technical experience. Check your camera and audio before the interview begins.
- ❖ Even if you don't get the job, a great interview and a well-written thank-you note may impress the interviewer, who may consider you for other jobs in the future.

Research the Company

Whether you interview in-person or not, you need to do your research. Most companies have a website with plenty of background information about the founders, company history, company mission statement, and so on.

Spend an hour reading through the company website and search for press releases, news items, and articles related to the business. Try to figure out where you would fit into the company and what skills you should highlight. Being able to talk confidently about the company and your potential role is a good way to show the interviewer that you want to work for them.

Research Potential Questions They May Ask You

Once you do your research on the company you want to work at, do some research into the potential questions they may ask you during the interview. Use Glassdoor.com to help you. The website allows you to type the name of your potential company and find questions asked

to other candidates who have gone through the interview process. You can even see the outcome of their interviews.

Remember Your Resume

Even if you snagged the job interview via your LinkedIn profile, bring a hard copy of your resume, just in case someone asks for it. Make sure it is up-to-date, polished, and easy to read. If no one asks for it, ask the interviewer if they would like a copy of it at the end of the interview.

During the Interview

Unless you are asked to use their first names, address your interviewer with their last name. Don't interrupt. Shake hands. Pull out those manners and use them, including maintaining good posture and positive body language. Stand up straight, walk tall and sit up straight in your chair.

If you are on a virtual interview, make sure to keep your backdrop professional, clear off any clutter in the way of the video, and don't eat or drink during it.

Make sure not to overshare in an interview and never speak badly of a former colleague, professor, or teacher.

Always Tell the Truth

Never lie during a job interview. Even if something is embarrassing or potentially problematic, when asked, you should answer honestly. But make sure not to share more than necessary. A few personal comments are OK, but they want to know if you can do the job and be a safer, better choice than the other students.

Be an Interview Extrovert

Even if you're an introvert, pretend to be an extrovert and adopt an extrovert persona for an hour or talk about yourself comfortably. Likewise, if you're an extrovert, don't overshare. Keep it professional.

Make Eye Contact

Making good eye contact is a skill, and sometimes it is difficult for young people to do it with confidence. Eye contact shows an employer that you are sincere, confident, and trustworthy. As a student interviewing for a job, you may not bring years of experience to the table. Still, you bring ambition, fresh perspective, willingness to work hard, and plenty of other valuable assets. Keep that in mind, and you can handle yourself with both courtesy and confidence.

After the Interview

Send a thank-you email right away after the interview. Keep it short and sincere and grammatically correct. Thank the interviewer for their time and reiterate that you are interested in the opportunity. You might not have felt it, but you were also evaluating the company and interviewing them, so let them know you are still interested. If you are worried about what to write in your email, try using a follow-up email template and get advice on writing it from experts.

REMEMBER-

- ❖ Reach venue before time
- ❖ While waiting read magazines
- ❖ Behave professionally in waiting area
- ❖ Take permission to enter interview room
- ❖ Take permission to sit

- ❖ Switch off mobile
- ❖ Don't tap feet
- ❖ Don't put bag on interviewer's table
- ❖ Wait for 5-10 seconds before answering questions
- ❖ Listen questions carefully
- ❖ Don't lie/ give wrong answers
- ❖ Don't criticize previous employer
- ❖ Write correct hobbies
- ❖ Thank the interviewer

ACTIVITIES (MIXED BAG)

Adla Badli (Impromptu Debate)

It will be same as a debate activity. Topics will be given to students and they will choose sides accordingly but on the day of activity the teacher will reverse the sides and will give some time to prepare.

This sudden change in sides will make children uneasy but they will also try to think differently for the changed sides.

Ask yourself (Self-made Questions)

An activity can be organised in which students have to prepare questions other than the textbooks questions. This exercise will help children to think differently for creating questions. Teacher will see if the questions are original or not.

Gap Fill In

Give paper and pen to students and after showing a picture ask them to write on the top of the paper what is happening in the picture. Then ask them to write at the bottom what you believe is happening in the

picture. In the space remaining blank write down what are the steps you take to come to the conclusion.

Cross-Questioning

This is the extended version of ask yourself. In this children will present their questions in front of the class and his/her peers will cross question him/her, like why this question, how this can happen etc. This will encourage critical thinking in both the students who ask the question and who reply.

Two is Enough

Give children two shapes i.e. rectangle, triangle and ask them to draw one thing using those shapes only. For ex. they can draw a car, an animal, a flower etc. This will enhance the thinking power of the children and as a consequence will also improve their innovative skills.

Student's Class

Ask students to organise a class themselves in which they will choose the topic, present the topic, frame questions and activity related to the topic etc. This activity will encourage conversations among children about how to organise the class and they will also learn the importance of maintaining the decorum of the class.

Shuffle

Give students group activities and use a chit system for dividing the students into groups. This random distribution of students will make most of the students uncomfortable but this is the challenge. Students should be flexible enough to work with anybody in various conditions.
